It allows working with bags: from 80x180mm – up to 500x1000mm

Weight: 48 Kg

Dimensions Characteristics (W x H x H)

- The construction of the machine is carriage type and is configured with two fixed feet and two wheels so that the user can transport it to the work point.
- For the operation with this equipment, it is essential to use bags of shrinkable material, and that these come in a continuous format glued by adhesive tape.

¿Why to use the Vac Giver accessory?

- This machine is the ideal complement for the packaging of heavy quantities of products.
- One of the points to streamline in the bagging process is the placement of the product within the same bag.
- The Vac Giver machine allows the user to greatly speed up this process, since it assists in the opening of the bag so that placing the product inside it is a quick task.

Advantages

- Greater work comfort for the user.
- Maximum agility in the bagging of products.
- Relevant saving time and a significant increase in production.

Setting of Vac Giver

- Place the box of bags * on the bottom. The machine has a space enabled for this
 - * **The bags have to be of a shrinkable material and have to come in a continuous format glued by adhesive tape.**
- Once the bag box is in its place, the adhesive tapes have to be fixed to the built-in traction motor. Turn on the machine and the process is automatic; the air blowing system opens each bag, and when starting it, the machine prepares the next one, so that the operator carries out the operation continuously.
